```

```
print(list(range(0,5)))
```

```
print(range(5))
```

in for loops, use plural names for the sequence and singular names for the iterable variables.

e.g for fruit in fruits:

or for bench in benches

#benches is the iterable(the sequence) and it comes after the in while bench is the iteration variable

#(it is bound to each item in the sequence.

note that an integer cannot be iterated
